AIR-DRY CLAY (HARD & STRONG)

It is an air-drying modeling material mixed with a special fiber that strengthens the product as it dries, making it harder and tougher than regular air-drying clay. It dries relatively fast (depending on the size of the project) and will fully dry within 24–48 hours. Once dried, the project will hold its shape and become durable.

After drying, it can be painted with acrylic paints to enhance the final appearance. It is perfect for creating model figurines or decorative projects around the house.

AIR-DRY CLAY (HARD & STRONG) must be stored in an airtight container to remain soft.
